SUPPLEMENT TO EACH FUND’S SUMMARY PROSPECTUS, PROSPECTUS AND STATEMENT OF ADDITIONAL
INFORMATION

DATED AUGUST 3, 2017

At a meeting of the Board of Trustees of the Trust (the “Board”) held on August 2, 2017, the Board approved an ETF Distribution Agreement appointing Foreside Fund Services, LLC (“Foreside Fund Services”) as the distributor for the Funds. Effective immediately, Foreside Fund Services will replace ALPS Distributors, Inc., the Funds’ current distributor, as distributor for the Funds. All references to ALPS Distributors, Inc. in each Fund’s prospectus and statement of additional information are replaced with Foreside Fund Services, LLC. Foreside Fund Service’s principal address is Three Canal Plaza, Suite 100, Portland, ME 04101.

Additionally, at the same meeting, the Board approved a Fund CCO and AMLO Agreement between Foreside Fund Officer Services, LLC (“Foreside Officer Services”) and the Trust under which Foreside Officer Services will perform certain compliance services for the Funds, including providing a chief compliance officer (“CCO”) to the Funds. Foreside Officer Services will replace ALPS Fund Services, Inc. who provided similar compliance services and had designated Melanie Zimdars as CCO to the Funds. Pursuant to new agreement, the Funds and Foreside Officer Services have designated James Nash as the CCO to the Funds. Effectively immediately, James Nash will replace Melanie Zimdars as each Fund’s CCO and all references to Melanie Zimdars in each Fund’s prospectus and statement of additional information is replaced with James Nash, and all references to ALPS Fund Services, Inc. are replaced with Foreside Fund Officer Services, LLC.

ELKHORN

PROSPECTUS

December 30, 2016

The Funds list and principally trade shares on BATS Exchange, Inc. (“BATS” or the “Exchange”). Shares of the Funds trade on the Exchange at market prices that may be below, at or above each Fund’s net asset value. Unlike mutual funds, the Funds issue and redeem shares at net asset value only in large specified blocks each consisting of 50,000 shares (each such block of shares called a “Creation Unit,” and, collectively, the “Creation Units”). The Creation Units are issued for securities in which the Funds invest and/or cash, and redeemed for securities and/or cash, and only to and from broker-dealers and large institutional investors that have entered into participation agreements.

The Funds are exchange-traded index funds and except when aggregated in Creation Units, the shares are not redeemable securities of the Funds.

NOT FDIC INSURED. MAY LOSE VALUE. NO BANK GUARANTEE.

The U.S. Securities and Exchange Commission (“SEC”) has not approved or disapproved these securities or passed upon the accuracy or adequacy of this prospectus. Any representation to the contrary is a criminal offense.

ELKHORN
S&P MIDCAP CONSUMER DISCRETIONARY PORTFOLIO
Summary Information

INVESTMENT OBJECTIVE

The Elkhorn S&P MidCap Consumer Discretionary Portfolio (the “Consumer Discretionary Fund” or the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S&P MidCap 400® Capped Consumer Discretionary Index (the “Index”).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.29%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses(*)	0.00%
Total Annual Fund Operating Expenses	0.29%

(*) Other Expenses are estimates based on the expenses the Fund expects to incur for the current fiscal year.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain at current levels until September 30, 2018, and thereafter to represent the imposition of the 12b-1 fee of an additional 0.25% per annum of the Fund’s average daily net assets. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

<u>1 YEAR</u>	<u>3 YEARS</u>
\$30	\$128

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account.

These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. At the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund generally will invest at least 90% of its total assets in common stocks of mid capitalization U.S. consumer discretionary companies that comprise the Index. The Index companies are mid capitalization companies that are principally engaged in the businesses of providing consumer goods and services that are cyclical in nature, including, but not limited to, household durables, leisure products and services, apparel and luxury goods, computers and electronics, automobiles and auto components, hotel and restaurant services and television and other entertainment goods and services. Pursuant to the Index, mid capitalization companies have a market capitalization of \$1.4 to \$5.9 billion. The Fund, using an indexing investment approach, attempts to replicate, before fees and expenses, the performance of the Index. The Fund's investment adviser seeks a correlation of 0.95 or better (before fees and expenses) between the Fund's performance and the performance of the Index; a figure of 1.00 would represent perfect correlation. S&P Opco LLC (a subsidiary of S&P Dow Jones Indices, LLC) ("S&P" or the "Index Provider") defines sectors according to the Global Industry Classification Standard ("GICS®") and compiles, maintains and calculates the Index strictly in accordance with its guidelines and procedures.

The Fund generally invests in all of the securities comprising the Index in proportion to their weightings in the Index. For more information on the Index, please refer to the Index Provider section later in this prospectus. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Concentration Policy. The Fund will concentrate its investments (*i.e.*, invest more than 25% of the value of its total assets) in securities of issuers in any one industry or group of industries only to the extent that the Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund's net asset value.

Consumer Discretionary Sector Risk. The Fund may be susceptible to adverse occurrences affecting the consumer discretionary sector. Companies engaged in the consumer discretionary sector are affected by fluctuations in supply and demand and changes in consumer preferences. Changes in consumer spending as

a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations also may adversely affect these companies.

Equity Securities Risk. The Fund invests in equity securities. The value of the Shares will fluctuate with changes in the value of these equity securities. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Fluctuation of Net Asset Value Risk. The Fund is generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of the Fund's investments. The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses.

Index Risk. The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Index, even if that security generally is underperforming.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of the Fund. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Overall security values could decline generally or could underperform other investments.

Mid Capitalization Risk. The Index and therefore the Fund will comprise mid capitalization stocks. As a result, the Fund may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies

may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

New Fund Risk. The Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, the Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, the performance of the Fund and the Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Index resulting from legal restrictions, cost or liquidity constraints.

Non-Diversification Risk. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.elkhorn.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT OF THE FUND

Investment Adviser. Elkhorn Investments, LLC (the "Adviser").

Investment Committee. There is no one individual primarily responsible for portfolio management decisions for the Fund. Investments are made under the direction of the Investment Committee. The Investment Committee consists of:

- Benjamin Fulton, Chair of the Investment Committee and Chief Executive Officer of the Adviser;
- Graham Day, Head of Product & Research;
- Jeff Wynsma, Senior Portfolio Manager;

- Jordan Golz, Product Development & Research Associate; and
- Derek Babb, Portfolio Manager.

Each member of the Investment Committee has served as a part of the portfolio management team of the Fund since inception.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares at net asset value (“NAV”) only with authorized participants (“APs”) that have entered into agreements with the Fund’s distributor and only in Creation Units (large blocks of 50,000 Shares) or multiples thereof (“Creation Unit Aggregations”), in exchange for the deposit or delivery of a basket of securities in which the Fund invests and/or cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are expected to be listed for trading on the Exchange and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

TAX INFORMATION

The Fund’s distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Adviser and ALPS Distributors, Inc., the Fund’s distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ELKHORN
S&P MIDCAP CONSUMER STAPLES PORTFOLIO
Summary Information

INVESTMENT OBJECTIVE

The Elkhorn S&P MidCap Consumer Staples Portfolio (the “Consumer Staples Fund” or the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S&P MidCap 400[®] Capped Consumer Staples Index (the “Index”).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.29%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses(*)	0.00%
Total Annual Fund Operating Expenses	0.29%

(*) Other Expenses are estimates based on the expenses the Fund expects to incur for the current fiscal year.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain at current levels until September 30, 2018, and thereafter to represent the imposition of the 12b-1 fee of an additional 0.25% per annum of the Fund’s average daily net assets. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

<u>1 YEAR</u>	<u>3 YEARS</u>
\$30	\$128

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account.

These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. At the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund generally will invest at least 90% of its total assets in common stocks of mid capitalization U.S. consumer staples companies that comprise the Index. The Index companies are mid capitalization companies that are principally engaged in the business of providing consumer goods and services that have non cyclical characteristics, including tobacco, food and beverage, and nondiscretionary retail. Pursuant to the Index, mid capitalization companies have a market capitalization of \$1.4 to \$5.9 billion. The Fund, using an indexing investment approach, attempts to replicate, before fees and expenses, the performance of the Index. The Fund's investment adviser seeks a correlation of 0.95 or better (before fees and expenses) between the Fund's performance and the performance of the Index; a figure of 1.00 would represent perfect correlation. S&P Opco LLC (a subsidiary of S&P Dow Jones Indices, LLC) ("S&P" or the "Index Provider") defines sectors according to the Global Industry Classification Standard ("GICS®") and compiles, maintains and calculates the Index strictly in accordance with its guidelines and procedures.

The Fund generally invests in all of the securities comprising the Index in proportion to their weightings in the Index. For more information on the Index, please refer to the Index Provider section later in this prospectus. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Concentration Policy. The Fund will concentrate its investments (*i.e.*, invest more than 25% of the value of its total assets) in securities of issuers in any one industry or group of industries only to the extent that the Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund's net asset value.

Consumer Staples Sector Risk. The Fund may be susceptible to adverse occurrences affecting the consumer staples sector. Changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending may adversely affect companies in the consumer staples sector. Companies in this sector also are affected by changes in government regulation, world events and economic conditions, as well as natural and man-made disasters and political, social or labor unrest that affect production and distribution of consumer staple products.

Equity Securities Risk. The Fund invests in equity securities. The value of the Shares will fluctuate with changes in the value of these equity securities. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Fluctuation of Net Asset Value Risk. The Fund is generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of the Fund's investments. The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses.

Food and Beverage Industry Concentration Risk. The Fund invests a significant portion of its assets in companies in the food and beverage industry. The food and beverage industry is highly competitive and can be significantly affected by demographic and product trends, competitive pricing, food fads, marketing campaigns, environmental factors, government regulation, adverse changes in general economic conditions, evolving consumer preferences, nutritional and health-related concerns, federal, state and local food inspection and processing controls, consumer product liability claims, consumer boycotts, risks of product tampering and the availability and expense of liability insurance.

Index Risk. The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Index, even if that security generally is underperforming.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of the Fund. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Overall security values could decline generally or could underperform other investments.

Mid Capitalization Risk. The Index and therefore the Fund will comprise mid capitalization stocks. As a result, the Fund may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

New Fund Risk. The Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, the Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. The Fund's return may not match the return of the Index for a number of reasons. PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund's net asset value.

Energy Sector Risk. The Fund may be susceptible to adverse occurrences affecting the energy sector. Changes in worldwide energy prices, exploration and production spending may adversely affect companies in the energy sector. Changes in government regulation, world events and economic conditions also affect these companies. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and

natural disasters. Commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources, development of alternative energy sources, technological developments and labor relations also could affect companies in this sector.

Equity Securities Risk. The Fund invests in equity securities. The value of the Shares will fluctuate with changes in the value of these equity securities. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Fluctuation of Net Asset Value Risk. The Fund is generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of the Fund's investments. The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses.

Index Risk. The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Index, even if that security generally is underperforming.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of the Fund. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Overall security values could decline generally or could underperform other investments.

Mid Capitalization Risk. The Index and therefore the Fund will comprise mid capitalization stocks. As a result, the Fund may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies

may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

New Fund Risk. The Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, the Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, the performance of the Fund and the Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Index resulting from legal restrictions, cost or liquidity constraints.

Non-Diversification Risk. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

Oil and Gas Services Industry Concentration Risk. The Fund may be susceptible to adverse occurrences affecting the oil and gas services industry. The profitability of companies in the oil and gas services industry may be affected adversely by world events in the regions that the companies operate (e.g., expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and repatriation of capital, military coups, social unrest, violence or labor unrest). Companies in the oil and gas services industry may have significant capital investments in, or engage in transactions involving, emerging market countries, which may heighten these risks.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.elkhorn.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT OF THE FUND

Investment Adviser. Elkhorn Investments, LLC (the “Adviser”).

Investment Committee. There is no one individual primarily responsible for portfolio management decisions for the Fund. Investments are made under the direction of the Investment Committee. The Investment Committee consists of:

- Benjamin Fulton, Chair of the Investment Committee and Chief Executive Officer of the Adviser;
- Graham Day, Head of Product & Research;
- Jeff Wynsma, Senior Portfolio Manager;
- Jordan Golz, Product Development & Research Associate; and
- Derek Babb, Portfolio Manager.

Each member of the Investment Committee has served as a part of the portfolio management team of the Fund since inception.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares at net asset value (“NAV”) only with authorized participants (“APs”) that have entered into agreements with the Fund’s distributor and only in Creation Units (large blocks of 50,000 Shares) or multiples thereof (“Creation Unit Aggregations”), in exchange for the deposit or delivery of a basket of securities in which the Fund invests and/or cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are expected to be listed for trading on the Exchange and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

TAX INFORMATION

The Fund’s distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Adviser and ALPS Distributors, Inc., the Fund’s distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ELKHORN S&P MIDCAP FINANCIALS PORTFOLIO

Summary Information

INVESTMENT OBJECTIVE

The Elkhorn S&P MidCap Financials Portfolio (the “Financials Fund” or the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S&P MidCap 400® Capped Financials Index (the “Index”).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.29%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses(*)	0.00%
Total Annual Fund Operating Expenses	0.29%

(*) Other Expenses are estimates based on the expenses the Fund expects to incur for the current fiscal year.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain at current levels until September 30, 2018, and thereafter to represent the imposition of the 12b-1 fee of an additional 0.25% per annum of the Fund’s average daily net assets. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 YEAR
\$30

3 YEARS
\$128

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account.

These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. At the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund generally will invest at least 90% of its total assets in common stocks of mid capitalization U.S. financial service companies that comprise the Index. The Index companies are mid capitalization companies that are principally engaged in the business of providing financial services and products, including banking, investment services, insurance and real estate finance services. Pursuant to the Index, mid capitalization companies have a market capitalization of \$1.4 to \$5.9 billion. The Fund, using an indexing investment approach, attempts to replicate, before fees and expenses, the performance of the Index. The Fund's investment adviser seeks a correlation of 0.95 or better (before fees and expenses) between the Fund's performance and the performance of the Index; a figure of 1.00 would represent perfect correlation. S&P Opco LLC (a subsidiary of S&P Dow Jones Indices, LLC) ("S&P" or the "Index Provider") defines sectors according to the Global Industry Classification Standard ("GICS[®]") and compiles, maintains and calculates the Index strictly in accordance with its guidelines and procedures.

The Fund generally invests in all of the securities comprising the Index in proportion to their weightings in the Index. For more information on the Index, please refer to the Index Provider section later in this prospectus. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Concentration Policy. The Fund will concentrate its investments (*i.e.*, invest more than 25% of the value of its total assets) in securities of issuers in any one industry or group of industries only to the extent that the Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund's net asset value.

Banking Industry Concentration Risk. The Fund may be susceptible to adverse economic or regulatory occurrences affecting the banking industry. Banks are subject to extensive government regulation that may affect the scope of their activities, their profitability, the prices that they can charge and the amount of capital that they must maintain. In addition, unstable interest rates can have a disproportionate

effect on the banking industry; banks whose securities the Fund may purchase may themselves have concentrated portfolios of loans or investments that make them vulnerable to economic conditions that affect that industry. Increased competition also may adversely affect the profitability or viability of banks.

Equity Securities Risk. The Fund invests in equity securities. The value of the Shares will fluctuate with changes in the value of these equity securities. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Financial Services Sector Risk. The Fund may be susceptible to adverse economic or regulatory occurrences affecting the financial services sector. Investing in the financial services sector involves risks, including the following: financial services companies are subject to extensive government regulation and, as a result, their profitability may be affected by new regulations or regulatory interpretations; unstable interest rates can have a disproportionate effect on the financial services sector; financial services companies whose securities the Fund may purchase may themselves have concentrated portfolios, which makes them vulnerable to economic conditions that affect that sector; and financial services companies have been affected by increased competition, which could adversely affect the profitability or viability of such companies.

Fluctuation of Net Asset Value Risk. The Fund is generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of the Fund's investments. The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses.

Index Risk. The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Index, even if that security generally is underperforming.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of the Fund. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Overall security values could decline generally or could underperform other investments.

Mid Capitalization Risk. The Index and therefore the Fund will comprise mid capitalization stocks. As a result, the Fund may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

Mortgage REIT Risk. Although the Fund will not invest in real estate directly, the mortgage real estate investment trusts (“REITs”) in which the Fund may invest are subject to risks inherent in the direct ownership of real estate. These risks include, but are not limited to, a possible lack of mortgage funds and associated interest rate risks, overbuilding, property vacancies, increases in property taxes and operating expenses, changes in zoning laws, losses due to environmental damages and changes in neighborhood values and appeal to purchasers.

New Fund Risk. The Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Fund’s market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, the Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. The Fund’s return may not match the return of the Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund’s securities holdings to reflect changes in the composition of the Index. In addition, the performance of the Fund and the Index may vary due to asset valuation differences and differences between the Fund’s portfolio and the Index resulting from legal restrictions, cost or liquidity constraints.

Non-Diversification Risk. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund’s volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund’s performance.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.elkhorn.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT OF THE FUND

Investment Adviser. Elkhorn Investments, LLC (the "Adviser").

Investment Committee. There is no one individual primarily responsible for portfolio management decisions for the Fund. Investments are made under the direction of the Investment Committee. The Investment Committee consists of:

- Benjamin Fulton, Chair of the Investment Committee and Chief Executive Officer of the Adviser;
- Graham Day, Head of Product & Research;
- Jeff Wynsma, Senior Portfolio Manager;
- Jordan Golz, Product Development & Research Associate; and
- Derek Babb, Portfolio Manager.

Each member of the Investment Committee has served as a part of the portfolio management team of the Fund since inception.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares at net asset value ("NAV") only with authorized participants ("APs") that have entered into agreements with the Fund's distributor and only in Creation Units (large blocks of 50,000 Shares) or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities in which the Fund invests and/or cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are expected to be listed for trading on the Exchange and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Adviser and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

ELKHORN
S&P MIDCAP HEALTH CARE PORTFOLIO
Summary Information

INVESTMENT OBJECTIVE

The Elkhorn S&P MidCap Health Care Portfolio (the “Health Care Fund” or the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S&P MidCap 400® Capped Health Care Index (the “Index”).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.29%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses(*)	0.00%
Total Annual Fund Operating Expenses	0.29%

(*) Other Expenses are estimates based on the expenses the Fund expects to incur for the current fiscal year.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain at current levels until September 30, 2018, and thereafter to represent the imposition of the 12b-1 fee of an additional 0.25% per annum of the Fund’s average daily net assets. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

<u>1 YEAR</u>	<u>3 YEARS</u>
\$30	\$128

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account.

These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. At the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund generally will invest at least 90% of its total assets in common stocks of mid capitalization U.S. healthcare companies that comprise the Index. The Index companies are mid capitalization companies that are principally engaged in the business of providing healthcare-related products, facilities and services, including biotechnology, pharmaceuticals, medical technology and supplies. Pursuant to the Index, mid capitalization companies have a market capitalization of \$1.4 to \$5.9 billion. The Fund, using an indexing investment approach, attempts to replicate, before fees and expenses, the performance of the Index. The Fund's investment adviser seeks a correlation of 0.95 or better (before fees and expenses) between the Fund's performance and the performance of the Index; a figure of 1.00 would represent perfect correlation. S&P Opco LLC (a subsidiary of S&P Dow Jones Indices, LLC) ("S&P" or the "Index Provider") defines sectors according to the Global Industry Classification Standard ("GICS[®]") and compiles, maintains and calculates the Index strictly in accordance with its guidelines and procedures.

The Fund generally invests in all of the securities comprising the Index in proportion to their weightings in the Index. For more information on the Index, please refer to the Index Provider section later in this prospectus. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Concentration Policy. The Fund will concentrate its investments (*i.e.*, invest more than 25% of the value of its total assets) in securities of issuers in any one industry or group of industries only to the extent that the Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund's net asset value.

Equity Securities Risk. The Fund invests in equity securities. The value of the Shares will fluctuate with changes in the value of these equity securities. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Fluctuation of Net Asset Value Risk. The Fund is generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of the Fund's investments. The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses.

Healthcare Sector Risk. The Fund may be susceptible to adverse occurrences affecting the healthcare sector. Factors such as extensive government regulation, restrictions on government reimbursement for medical expenses, rising costs of medical products, services and facilities, pricing pressure, an increased emphasis on outpatient services, limited number of products, industry innovation, costs associated with obtaining and protecting patents, product liability and other claims, changes in technologies and other market developments can affect companies in the healthcare sector.

Index Risk. The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Index, even if that security generally is underperforming.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of the Fund. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Overall security values could decline generally or could underperform other investments.

Mid Capitalization Risk. The Index and therefore the Fund will comprise mid capitalization stocks. As a result, the Fund may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies

may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

New Fund Risk. The Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, the Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, the performance of the Fund and the Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Index resulting from legal restrictions, cost or liquidity constraints.

Non-Diversification Risk. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

ELKHORN S&P MIDCAP INDUSTRIALS PORTFOLIO

Summary Information

INVESTMENT OBJECTIVE

The Elkhorn S&P MidCap Industrials Portfolio (the “Industrials Fund” or the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S&P MidCap 400® Capped Industrials Index (the “Index”).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.29%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses(*)	0.00%
Total Annual Fund Operating Expenses	0.29%

(*) Other Expenses are estimates based on the expenses the Fund expects to incur for the current fiscal year.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain at current levels until September 30, 2018, and thereafter to represent the imposition of the 12b-1 fee of an additional 0.25% per annum of the Fund’s average daily net assets. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

1 YEAR
\$30

3 YEARS
\$128

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account.

These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. At the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund generally will invest at least 90% of its total assets in common stocks of mid capitalization U.S. industrial companies that comprise the Index. The Index companies are mid capitalization companies that are principally engaged in the business of providing industrial products and services, including engineering, heavy machinery, construction, electrical equipment, aerospace and defense and general manufacturing. Pursuant to the Index, mid capitalization companies have a market capitalization of \$1.4 to \$5.9 billion. The Fund, using an indexing investment approach, attempts to replicate, before fees and expenses, the performance of the Index. The Fund's investment adviser seeks a correlation of 0.95 or better (before fees and expenses) between the Fund's performance and the performance of the Index; a figure of 1.00 would represent perfect correlation. S&P Opco LLC (a subsidiary of S&P Dow Jones Indices, LLC) ("S&P" or the "Index Provider") defines sectors according to the Global Industry Classification Standard ("GICS®") and compiles, maintains and calculates the Index strictly in accordance with its guidelines and procedures.

The Fund generally invests in all of the securities comprising the Index in proportion to their weightings in the Index. For more information on the Index, please refer to the Index Provider section later in this prospectus. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Concentration Policy. The Fund will concentrate its investments (*i.e.*, invest more than 25% of the value of its total assets) in securities of issuers in any one industry or group of industries only to the extent that the Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund's net asset value.

Equity Securities Risk. The Fund invests in equity securities. The value of the Shares will fluctuate with changes in the value of these equity securities. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Fluctuation of Net Asset Value Risk. The Fund is generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of the Fund's investments. The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses.

Index Risk. The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Index, even if that security generally is underperforming.

Industrials Sector Risk. The Fund may be susceptible to adverse occurrences affecting the industrials sector. Changes in government regulation, world events and economic conditions may adversely affect companies in the industrials sector. In addition, these companies are at risk for environmental and product liability damage claims. Also, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources, technological developments and labor relations could adversely affect the companies in this sector.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of the Fund. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Overall security values could decline generally or could underperform other investments.

Mid Capitalization Risk. The Index and therefore the Fund will comprise mid capitalization stocks. As a result, the Fund may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies

may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

New Fund Risk. The Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, the Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, the performance of the Fund and the Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Index resulting from legal restrictions, cost or liquidity constraints.

Non-Diversification Risk. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.elkhorn.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT OF THE FUND

Investment Adviser. Elkhorn Investments, LLC (the "Adviser").

Investment Committee. There is no one individual primarily responsible for portfolio management decisions for the Fund. Investments are made under the direction of the Investment Committee. The Investment Committee consists of:

- Benjamin Fulton, Chair of the Investment Committee and Chief Executive Officer of the Adviser;
- Graham Day, Head of Product & Research;
- Jeff Wynsma, Senior Portfolio Manager;

- Jordan Golz, Product Development & Research Associate; and
- Derek Babb, Portfolio Manager.

Each member of the Investment Committee has served as a part of the portfolio management team of the Fund since inception.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares at net asset value (“NAV”) only with authorized participants (“APs”) that have entered into agreements with the Fund’s distributor and only in Creation Units (large blocks of 50,000 Shares) or multiples thereof (“Creation Unit Aggregations”), in exchange for the deposit or delivery of a basket of securities in which the Fund invests and/or cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are expected to be listed for trading on the Exchange and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

TAX INFORMATION

The Fund’s distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Adviser and ALPS Distributors, Inc., the Fund’s distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ELKHORN

S&P MIDCAP INFORMATION TECHNOLOGY PORTFOLIO

Summary Information

INVESTMENT OBJECTIVE

The Elkhorn S&P MidCap Information Technology Portfolio (the “Information Technology Fund” or the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S&P MidCap 400® Capped Information Technology Index (the “Index”).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)

Management Fees	0.29%

1 YEAR
\$30

3 YEARS
\$128

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account.

These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. At the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund generally will invest at least 90% of its total assets in common stocks of mid capitalization U.S. information technology companies that comprise the Index. The Index companies are mid capitalization companies that are principally engaged in the business of providing information technology-related products and services, including computer hardware and software, Internet, electronics and semiconductors, and communication technologies. Pursuant to the Index, mid capitalization companies have a market capitalization of \$1.4 to \$5.9 billion. The Fund, using an indexing investment approach, attempts to replicate, before fees and expenses, the performance of the Index. The Fund's investment adviser seeks a correlation of 0.95 or better (before fees and expenses) between the Fund's performance and the performance of the Index; a figure of 1.00 would represent perfect correlation. S&P Opco LLC (a subsidiary of S&P Dow Jones Indices, LLC) ("S&P" or the "Index Provider") defines sectors according to the Global Industry Classification Standard ("GICS") and compiles, maintains and calculates the Index strictly in accordance with its guidelines and procedures.

The Fund generally invests in all of the securities comprising the Index in proportion to their weightings in the Index. For more information on the Index, please refer to the Index Provider section later in this prospectus. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Concentration Policy. The Fund will concentrate its investments (*i.e.*, invest more than 25% of the value of its total assets) in securities of issuers in any one industry or group of industries only to the extent that the Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund's net asset value.

Equity Securities Risk. The Fund invests in equity securities. The value of the Shares will fluctuate with changes in the value of these equity securities. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Fluctuation of Net Asset Value Risk. The Fund is generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of the Fund's investments. The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses.

Index Risk. The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Index, even if that security generally is underperforming.

Information Technology Sector Risk. The Fund may be susceptible to adverse occurrences affecting the information technology sector. Factors such as the failure to obtain, or delays in obtaining, financing or regulatory approval, intense competition, product compatibility, consumer preferences, corporate capital expenditure, rapid obsolescence, competition from alternative technologies, and research and development of new products may significantly affect the market value of securities of issuers in the information technology sector.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of the Fund. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Overall security values could decline generally or could underperform other investments.

Mid Capitalization Risk. The Index and therefore the Fund will comprise mid capitalization stocks. As a result, the Fund may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies

may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

New Fund Risk. The Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, the Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. The Fund's return may not match the return of the Index for a number of reasons. This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain at current levels until September 30, 2018, and thereafter to represent the imposition of the 12b-1 fee of an additional 0.25% per annum of the Fund’s average daily net assets. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

<u>1 YEAR</u>	<u>3 YEARS</u>
\$30	\$128

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account.

These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. At the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund generally will invest at least 90% of its total assets in common stocks of mid capitalization U.S. materials companies that comprise the Index. The Index companies are mid capitalization companies that are principally engaged in the business of producing raw materials, including paper or wood products, chemicals, construction materials, and mining and metals. Pursuant to the Index, mid capitalization companies have a market capitalization of \$1.4 to \$5.9 billion. The Fund, using an indexing investment approach, attempts to replicate, before fees and expenses, the performance of the Index. The Fund's investment adviser seeks a correlation of 0.95 or better (before fees and expenses) between the Fund's performance and the performance of the Index; a figure of 1.00 would represent perfect correlation. S&P Opco LLC (a subsidiary of S&P Dow Jones Indices, LLC) ("S&P" or the "Index Provider") defines sectors according to the Global Industry Classification Standard ("GICS[®]") and compiles, maintains and calculates the Index strictly in accordance with its guidelines and procedures.

The Fund generally invests in all of the securities comprising the Index in proportion to their weightings in the Index. For more information on the Index, please refer to the Index Provider section later in this prospectus. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Concentration Policy. The Fund will concentrate its investments (*i.e.*, invest more than 25% of the value of its total assets) in securities of issuers in any one industry or group of industries only to the extent that the Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund's net asset value.

Basic Materials Sector Risk. The Fund may be susceptible to adverse occurrences affecting the basic materials sector. Changes in world events, political, environmental and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations may adversely affect the companies engaged in the production and distribution of basic materials.

Equity Securities Risk. The Fund invests in equity securities. The value of the Shares will fluctuate with changes in the value of these equity securities. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Fluctuation of Net Asset Value Risk. The Fund is generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of the Fund's investments. The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses.

Index Risk. The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Index, even if that security generally is underperforming.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of the Fund. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Overall security values could decline generally or could underperform other investments.

Mid Capitalization Risk. The Index and therefore the Fund will comprise mid capitalization stocks. As a result, the Fund may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

New Fund Risk. The Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, the Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, the performance of the Fund and the Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Index resulting from legal restrictions, cost or liquidity constraints.

Non-Diversification Risk. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not commenced operations and therefore does not have a performance history. Each member of the Investment Committee has served as a part of the portfolio management team of the Fund since inception.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares at net asset value (“NAV”) only with authorized participants (“APs”) that have entered into agreements with the Fund’s distributor and only in Creation Units (large blocks of 50,000 Shares) or multiples thereof (“Creation Unit Aggregations”), in exchange for the deposit or delivery of a basket of securities in which the Fund invests and/or cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are expected to be listed for trading on the Exchange and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

TAX INFORMATION

The Fund’s distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Adviser and ALPS Distributors, Inc., the Fund’s distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary’s website for more information.

ELKHORN
S&P MIDCAP UTILITIES PORTFOLIO
Summary Information

INVESTMENT OBJECTIVE

The Elkhorn S&P MidCap Utilities Portfolio (the “Utilities Fund” or the “Fund”) seeks investment results that generally correspond (before fees and expenses) to the price and yield of the S&P MidCap 400® Capped Utilities Index (the “Index”).

FUND FEES AND EXPENSES

This table describes the fees and expenses that you may pay if you buy and hold shares of the Fund (“Shares”). Investors may pay brokerage commissions on their purchases and sales of Shares, which are not reflected in the table or the example below.

Annual Fund Operating Expenses (expenses that you pay each year as a percentage of the value of your investment)	
Management Fees	0.29%
Distribution and Service (12b-1) Fees	0.00%
Other Expenses(*)	0.00%
Total Annual Fund Operating Expenses	0.29%

(*) Other Expenses are estimates based on the expenses the Fund expects to incur for the current fiscal year.

EXAMPLE

This example is intended to help you compare the cost of investing in the Fund with the cost of investing in other funds.

This example assumes that you invest \$10,000 in the Fund for the time periods indicated and then sell all of your Shares at the end of those periods. The example also assumes that your investment has a 5% return each year and that the Fund’s operating expenses remain at current levels until September 30, 2018, and thereafter to represent the imposition of the 12b-1 fee of an additional 0.25% per annum of the Fund’s average daily net assets. This example does not include the brokerage commissions that investors may pay to buy and sell Shares. Although your actual costs may be higher or lower, your costs, based on these assumptions, would be:

<u>1 YEAR</u>	<u>3 YEARS</u>
\$30	\$128

PORTFOLIO TURNOVER

The Fund pays transaction costs, such as commissions, when it purchases and sells securities (or “turns over” its portfolio). A higher portfolio turnover will cause the Fund to incur additional transaction costs and may result in higher taxes when Shares are held in a taxable account.

These costs, which are not reflected in Total Annual Fund Operating Expenses or in the example, may affect the Fund's performance. At the date of this prospectus, the Fund does not have an operating history and turnover data therefore is not available.

PRINCIPAL INVESTMENT STRATEGIES

The Fund generally will invest at least 90% of its total assets in common stocks of mid capitalization U.S. utility companies that comprise the Index. The Index companies are mid capitalization companies that are principally engaged in providing either energy, water, electric or natural gas utilities or providing telecommunications services. Pursuant to the Index, mid capitalization companies have a market capitalization of \$1.4 to \$5.9 billion. The Fund, using an indexing investment approach, attempts to replicate, before fees and expenses, the performance of the Index. The Fund's investment adviser seeks a correlation of 0.95 or better (before fees and expenses) between the Fund's performance and the performance of the Index; a figure of 1.00 would represent perfect correlation. S&P Opco LLC (a subsidiary of S&P Dow Jones Indices, LLC) ("S&P" or the "Index Provider") defines sectors according to the Global Industry Classification Standard ("GICS") and compiles, maintains and calculates the Index strictly in accordance with its guidelines and procedures.

The Fund generally invests in all of the securities comprising the Index in proportion to their weightings in the Index. For more information on the Index, please refer to the Index Provider section later in this prospectus. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Concentration Policy. The Fund will concentrate its investments (*i.e.*, invest more than 25% of the value of its total assets) in securities of issuers in any one industry or group of industries only to the extent that the Index reflects a concentration in that industry or group of industries. The Fund will not otherwise concentrate its investments in securities of issuers in any one industry or group of industries.

PRINCIPAL RISKS OF INVESTING IN THE FUND

You could lose money by investing in the Fund. An investment in the Fund is not a deposit of a bank and is not insured or guaranteed by the Federal Deposit Insurance Corporation or any other governmental agency. There can be no assurance that the Fund's investment objective will be achieved.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above the Fund's net asset value.

Energy Sector Risk. The Fund may be susceptible to adverse occurrences affecting the energy sector. Changes in worldwide energy prices, exploration and production spending may adversely affect companies in the energy sector. Changes in government regulation, world events and economic conditions also affect these companies. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and

natural disasters. Commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources, development of alternative energy sources, technological developments and labor relations also could affect companies in this sector.

Equity Securities Risk. The Fund invests in equity securities. The value of the Shares will fluctuate with changes in the value of these equity securities. Equity securities prices fluctuate for several reasons, including changes in investors' perceptions of the financial condition of an issuer or the general condition of the relevant stock market, such as the current market volatility, or when political or economic events affecting the issuers occur.

Fluctuation of Net Asset Value Risk. The Fund is generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of the Fund's investments. The net asset value of Shares will generally fluctuate with changes in the market value of the Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in net asset value as well as the relative supply of and demand for Shares on the Exchange. The Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of the Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses.

Index Risk. The Fund is not actively managed. The Fund invests in securities included in or representative of its Index regardless of their investment merit. Unlike many investment companies, the Fund does not utilize an investing strategy that seeks returns in excess of the Index. Therefore, it would not necessarily buy or sell a security unless that security is added or removed, respectively, from the Index, even if that security generally is underperforming.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of the Fund. If the Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between the Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Market risk is the risk that a particular security owned by the Fund or the Shares in general may fall in value. Securities are subject to market fluctuations caused by such factors as economic, political, regulatory or market developments, changes in interest rates and perceived trends in securities prices. Overall security values could decline generally or could underperform other investments.

Mid Capitalization Risk. The Index and therefore the Fund will comprise mid capitalization stocks. As a result, the Fund may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause the Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies

may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

New Fund Risk. The Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Fund's market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, the Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. The Fund's return may not match the return of the Index for a number of reasons. For example, the Fund incurs operating expenses not applicable to the Index, and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, the performance of the Fund and the Index may vary due to asset valuation differences and differences between the Fund's portfolio and the Index resulting from legal restrictions, cost or liquidity constraints.

Non-Diversification Risk. Because the Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase the Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

Oil and Gas Services Industry Concentration Risk. The Fund may be susceptible to adverse occurrences affecting the oil and gas services industry. The profitability of companies in the oil and gas services industry may be affected adversely by world events in the regions that the companies operate (e.g., expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and repatriation of capital, military coups, social unrest, violence or labor unrest). Companies in the oil and gas services industry may have significant capital investments in, or engage in transactions involving, emerging market countries, which may heighten these risks.

Utilities Sector Risk. The Fund may be susceptible to adverse occurrences affecting the utilities sector. Issuers in the utility sector are subject to a variety of factors that may adversely affect their business or operations, including high interest costs associated with capital construction and improvement programs; difficulty in raising adequate capital on reasonable terms in periods of high inflation and unsettled capital markets; governmental regulation of rates that the issuer can charge to customers; costs associated with compliance with, and adjusting to changes to, environmental and other regulations; effects of economic slowdowns and surplus capacity; increased competition from other providers of utility services; inexperience with, and potential losses resulting from, a developing deregulatory environment; costs associated with the reduced availability of certain types of fuel, occasionally reduced availability and high costs of natural gas for resale, and the effects of energy conservation policies; effects of a national energy policy and lengthy delays, and greatly increased costs and other problems associated with the design, construction, licensing, regulation and operation of nuclear facilities for electric generation, including, among other considerations, the problems associated with the use of radioactive materials and the

disposal of radioactive wastes; technological innovations that may render existing plants, equipment or products obsolete; difficulty in obtaining regulatory approval of new technologies; lack of compatibility of telecommunications equipment; and potential impact of terrorist activities on the utility industry and its customers and the impact of natural or man-made disasters. Issuers in the utilities sector also may be subject to regulation by various governmental authorities and may be affected by the imposition of special tariffs and changes in tax laws, regulatory policies and accounting standards.

The Shares will change in value, and you could lose money by investing in the Fund. The Fund may not achieve its investment objective.

PERFORMANCE

As of the date of this prospectus, the Fund has not commenced operations and therefore does not have a performance history. Once available, the Fund's performance information will be accessible on the Fund's website at www.elkhorn.com and will provide some indication of the risks of investing in the Fund.

MANAGEMENT OF THE FUND

Investment Adviser. Elkhorn Investments, LLC (the "Adviser").

Investment Committee. There is no one individual primarily responsible for portfolio management decisions for the Fund. Investments are made under the direction of the Investment Committee. The Investment Committee consists of:

- Benjamin Fulton, Chair of the Investment Committee and Chief Executive Officer of the Adviser;
- Graham Day, Head of Product & Research;
- Jeff Wynsma, Senior Portfolio Manager;
- Jordan Golz, Product Development & Research Associate; and
- Derek Babb, Portfolio Manager.

Each member of the Investment Committee has served as a part of the portfolio management team of the Fund since inception.

PURCHASE AND SALE OF SHARES

The Fund issues and redeems Shares at net asset value ("NAV") only with authorized participants ("APs") that have entered into agreements with the Fund's distributor and only in Creation Units (large blocks of 50,000 Shares) or multiples thereof ("Creation Unit Aggregations"), in exchange for the deposit or delivery of a basket of securities in which the Fund invests and/or cash. Except when aggregated in Creation Units, the Shares are not redeemable securities of the Fund.

Individual Shares may be purchased and sold only on a national securities exchange through brokers. Shares are expected to be listed for trading on the Exchange and because the Shares will trade at market prices rather than NAV, Shares may trade at prices greater than NAV (at a premium), at NAV, or less than NAV (at a discount).

TAX INFORMATION

The Fund's distributions will generally be taxable as ordinary income or capital gains. A sale of Shares may result in capital gain or loss.

PAYMENTS TO BROKER-DEALERS AND OTHER FINANCIAL INTERMEDIARIES

If you purchase Shares through a broker-dealer or other financial intermediary (such as a bank), the Adviser and ALPS Distributors, Inc., the Fund's distributor, may pay the intermediary for the sale of Shares and related services. These payments may create a conflict of interest by influencing the broker-dealer or other intermediary and your salesperson to recommend the Fund over another investment. Ask your salesperson or visit your financial intermediary's website for more information.

Additional Information About the Funds' Strategies and Risks

PRINCIPAL INVESTMENT STRATEGIES

The Funds are series of the Trust, an investment company and an exchange-traded “index fund.” The investment objectives of the Funds are to seek investment results that correspond generally to the price and yield (before each Fund’s fees and expenses) of each Fund’s respective Index (collectively, the “Indices”). Each Fund generally will invest at least 90% of its total assets in common stocks that comprise its respective Index. Each Fund’s investment objective, the 90% investment strategy and each of the policies described herein are non-fundamental policies that may be changed by the Board of Trustees of the Trust (the “Board”) without shareholder approval. As non-fundamental policies, each Fund’s investment objective and the 90% investment strategy require 60 days’ prior written notice to shareholders before they can be changed. Certain fundamental policies of the Funds are set forth in the Funds’ Statement of Additional Information (“SAI”) under “Investment Objective and Policies.”

Each Fund uses an “indexing” investment approach to attempt to replicate, before fees and expenses, the performance of its respective Index. The Adviser seeks correlation over time of 0.95 or better between each Fund’s performance and the performance of its respective Index; a figure of 1.00 would represent perfect correlation. Another means of evaluating the relationship between the returns of a Fund and its Index is to assess the “tracking error” between the two. Tracking error means the variation between the Fund’s annual return and the return of the Index, expressed in terms of standard deviation. Each Fund seeks to have a tracking error of less than 5%, measured on a monthly basis over a one-year period by taking the standard deviation of the difference in the Fund’s returns versus the Index’s returns.

Each Fund generally invests in all of the securities comprising its respective Index in proportion to the weightings of the securities in the Index. Because each Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund.

Additional information about the construction of the Indices is set forth below in the section entitled “Index Provider.”

The Funds' Investments

EQUITY SECURITIES

The Funds invest in equity securities, which will primarily include common stocks. Equity securities represent an ownership position in a company. The prices of equity securities fluctuate based on, among other things, events specific to their issuers and market, economic, and other conditions.

CASH EQUIVALENTS AND SHORT-TERM INVESTMENTS

A Fund may invest in securities with maturities of less than one year or cash equivalents, or it may hold cash, in order to collateralize its investments. The percentage of a Fund invested in such holdings varies and depends on several factors, including market conditions. During the initial invest-up period and during

periods of high cash inflows or outflows, if market conditions are not favorable, a Fund may depart from its principal investment strategies and invest part or all of its assets in these securities or it may hold cash. During such periods, a Fund may not be able to achieve its investment objective. For more information on eligible short term investments, see the SAI.

PRINCIPAL RISKS OF INVESTING IN THE FUNDS

The following provides additional information about certain of the principal risks identified under “Principal Risks of Investing in the Fund” in each Fund’s “Summary Information” section.

Risk is inherent in all investing. Investing in a Fund involves risk, including the risk that you may lose all or part of your investment. There can be no assurance that a Fund will meet its stated objectives. Before you invest, you should consider the following risks in addition to the Principal Risks set forth above in this prospectus.

Active Market Risk. Although the Shares are listed for trading on the Exchange, there can be no assurance that an active trading market for the Shares will develop or be maintained. Shares trade on the Exchange at market prices that may be below, at or above a Fund’s net asset value. Disruptions affecting the APs that have entered into agreements with a Fund’s distributor or market participants generally may result in Shares trading at market prices below the Fund’s net asset value. APs may be less willing to create or redeem Shares if there is a lack of an active market for such Shares or any underlying investments, which may contribute to the Shares trading at a discount to net asset value.

Banking Industry Concentration Risk. The Financials Fund invests in banks, which are subject to extensive government regulation that may affect the scope of their activities, their profitability, the prices that they can charge and the amount of capital that they must maintain. In addition, unstable interest rates can have a disproportionate effect on the banking industry; banks whose securities the Fund may purchase may themselves have concentrated portfolios of loans or investments that make them vulnerable to economic conditions that affect that industry. Increased competition also may affect adversely the profitability or viability of banks. In addition, the banking industry is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Increased government involvement in the banking industry, including measures such as taking ownership positions in such institutions, could result in a dilution in the value of the shares that shareholders hold in such institutions. The recent deterioration of the credit markets has caused an adverse impact on a broad range of financial markets, thereby causing certain banking institutions to incur large losses. Certain banking institutions have experienced declines in the valuation of their assets and even ceased operations.

Basic Materials Sector Risk. For the Materials Fund, companies engaged in the production and distribution of basic materials may be adversely affected by changes in world events, political and economic conditions, energy conservation, environmental policies, commodity price volatility, changes in exchange rates, increased competition and the imposition of import controls. Production of industrial materials often exceeds demand as a result of over-building or economic downturns, leading to poor investment returns.

In addition, issuers in the basic materials sector are at risk for environmental damage and product liability claims and may be adversely affected by depletion of resources, technical progress, labor relations and government regulations.

Consumer Discretionary Sector Risk. For the Consumer Discretionary Fund, companies engaged in the consumer discretionary sector are affected by fluctuations in supply and demand and changes in consumer preferences. Changes in consumer spending as a result of world events, political and economic conditions, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources and labor relations also may adversely affect these companies.

Consumer Staples Sector Risk. The Consumer Staples Fund faces the risk that changes in the worldwide economy, consumer spending, competition, demographics and consumer preferences, exploration and production spending may adversely affect companies in the consumer staples sector. Changes in government regulation, world events and economic conditions, as well as natural and man-made disasters and political, social or labor unrest, also affect companies in this sector.

Energy Sector Risk. The Energy Fund and the Utilities Fund invest a significant portion of their assets in securities issued by companies in the energy sector. Companies in the energy sector are subject to extensive government regulation, including contractual fixed pricing, which may increase the cost of business and limit these companies' earnings. A significant portion of their revenues may depend on a relatively small number of customers, including governmental entities and utilities. As a result, governmental budget constraints may have a material adverse effect on the stock prices of companies in this industry.

Companies in which the Energy Fund and the Utilities Fund may invest may do business with companies in countries other than the United States. Such companies often operate in countries with less stringent regulatory regimes and countries that have a history of expropriation and/or nationalization, among other adverse policies. In addition, these companies are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters. The energy sector is cyclical, and commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources, development of alternative energy sources, technological developments and labor relations also could affect companies in this sector. Recent global economic events have created greater volatility in the energy sector, including substantial declines in the price of oil. Such events may create wide fluctuations in the value of companies in this sector, which may affect the Shares.

Equity Securities Risk. Equity risk is the risk that the value of the securities a Fund holds will fall due to general market and economic conditions, perceptions regarding the industries in which the issuers of securities the Fund holds participate or factors relating to specific companies in which the Fund invests. For example, an adverse event, such as an unfavorable earnings report, may depress the value of securities the Fund holds; the price of securities may be particularly sensitive to general movements in the stock market; or a drop in the stock market may depress the price of most or all of the securities the Fund holds.

In addition, securities of an issuer in a Fund's portfolio may decline in price if the issuer fails to make anticipated dividend payments because, among other reasons, the issuer of the security experiences a decline in its financial condition.

Financial Services Sector Risk. The Financials Fund faces the risks of investing in the financial services sector, which include the following: financial services companies are subject to extensive government regulation and, as a result, their profitability may be affected by new regulations or regulatory interpretations, unstable interest rates can have a disproportionate effect on the financial services sector; financial services companies whose securities the Fund may purchase may themselves have concentrated portfolios, which makes them vulnerable to economic conditions that affect that sector; and financial services companies have been affected by increased competition, which could adversely affect the profitability or viability of such companies. In addition, the financial services sector is undergoing numerous changes, including continuing consolidations, development of new products and structures and changes to its regulatory framework. Increased government involvement in financial institutions, including measures such as taking ownership positions in such institutions, could result in a dilution in the value of the shares held by shareholders in such institutions.

Moreover, global economies and financial markets are becoming increasingly interconnected, which increases the possibilities that conditions in one country or region may adversely affect issuers in another country or region, which may adversely affect securities held by a Fund. These circumstances have also decreased liquidity in some markets and may continue to do so. Liquidity in some markets has decreased and credit has become scarcer worldwide. The recent deterioration of the credit markets has caused an adverse impact on a broad range of financial markets, thereby causing certain financial services companies to incur large losses. Certain financial services companies have experienced decline in the valuation of their assets and even ceased operations.

Financial services companies also are subject to extensive government regulation and, as a result, their profitability may be affected by new regulations or regulatory interpretations. Recent regulatory changes, including the Dodd-Frank Wall Street Reform and Consumer Protection Act (the "Dodd-Frank Act") and the introduction of new international capital and liquidity requirements under the Basel III Accords ("Basel III"), may cause lending activity within the financial services sector to be constrained for several years as Basel III rules phase in and rules and regulations are promulgated and interpreted under the Dodd-Frank Act. These market conditions may continue or deteriorate further and may add significantly to the risk of short-term volatility in a Fund.

Food and Beverage Industry Concentration Risk. The Consumer Staples Fund invests a significant portion of its assets in companies in the food and beverage industry. The food and beverage industry is highly competitive and can be significantly affected by demographic and product trends, competitive pricing, food fads, marketing campaigns, environmental factors, government regulation, adverse changes in general economic conditions, evolving consumer preferences, nutritional and health-related concerns, federal, state and local food inspection and processing controls, consumer product liability claims, consumer boycotts, risks of product tampering and the availability and expense of liability insurance.

Fluctuation of Net Asset Value Risk. The Funds are generally subject to liquidity risk that may affect the market for Shares as compared to the underlying value of a Fund's investments. The NAV of the Shares will generally fluctuate with changes in the market value of a Fund's holdings. The market prices of Shares will generally fluctuate in accordance with changes in NAV as well as the relative supply of and demand for Shares on the Exchange. A Fund cannot predict whether Shares will trade below, at or above their net asset value. Price differences may be due, in large part, to the fact that supply and demand forces at work in the secondary trading market for Shares will be closely related to, but not identical to, the same forces influencing the prices of the holdings of a Fund trading individually or in the aggregate at any point in time. If a shareholder purchases at a time when the market price is at a premium to the net asset value of the Shares, or sells at a time when the market price is at a discount to the net asset value of the Shares, the shareholder may sustain losses. However, given that Shares can only be purchased and redeemed in Creation Units, and only to and from broker-dealers and large institutional investors that have entered into participation agreements (unlike shares of closed-end funds, which frequently trade at appreciable discounts from, and sometimes at premiums to, their net asset value), each Fund believes that large discounts or premiums to the net asset value of Shares should not be sustained.

Healthcare Sector Risk. For the Health Care Fund, factors that may affect the profitability of companies in the healthcare sector include extensive government regulation, restrictions on government reimbursement for medical expenses, rising costs of medical products, services and facilities, pricing pressure, an increased emphasis on outpatient services, limited number of products and product obsolescence due to industry innovation, changes in technologies and other market developments. A major source of revenue for the healthcare industry is payments from the Medicare and Medicaid programs. As a result, the industry is sensitive to legislative changes and reductions in governmental spending for such programs. Companies in the healthcare sector depend heavily on patent protection. The process of obtaining patent approval can be long and costly, and the expiration of patents may adversely affect the profitability of the companies. Healthcare companies also are subject to extensive litigation based on product liability and similar claims. Additional factors also may adversely affect healthcare companies, and state or local healthcare reform measures. Many new products are subject to regulatory approval and the process of obtaining such approval can be long and costly. Healthcare companies also are subject to competitive forces that may make raising prices difficult and, at times, may result in price discounting. In addition, companies in the healthcare sector may be thinly capitalized and therefore may be susceptible to product obsolescence.

Index Risk. The Funds are not actively managed. Unlike many investment companies, the Funds do not utilize an investing strategy that seeks returns in excess of each Fund's respective Index. Therefore, a Fund would not necessarily buy or sell a security unless that security is added or removed, respectively, from its Index, even if that security generally is underperforming.

Industrials Sector Risk. For the Industrials Fund, changes in government regulation, world events and economic conditions may adversely affect companies in the industrials sector. In addition, these companies are at risk for environmental damage claims. Also, commodity price volatility, changes in exchange rates, imposition of import controls, increased competition, depletion of resources, technological developments and labor relations could adversely affect the companies in this sector.

Information Technology Sector Risk. For the Information Technology Fund, the failure to obtain, or delays in obtaining, financing or regulatory approval, intense competition, product compatibility, consumer preferences, corporate capital expenditure, rapid obsolescence and research and development of new products can significantly affect the companies in the technology sector. Companies in the technology sector also face competition or potential competition with numerous alternative technologies. In addition, the highly competitive technology sector may cause the prices for these products and services to decline in the future. Patent protection is integral to the success of many companies in this sector, and profitability may be affected materially by, among other things, the cost of obtaining (or failing to obtain) patent approvals, the cost of litigating patent infringement and the loss of patent protection for products. The technology sector is subject to rapid and significant changes in technology that are evidenced by the increasing pace of technological upgrades, evolving industry standards, ongoing improvements in the capacity and quality of digital technology, shorter development cycles for new products and enhancements, developments in emerging wireless transmission technologies and changes in customer requirements and preferences. The success of the sector participants depends substantially on the timely and successful introduction of new products.

Market Making Risk. Market-making third parties may be required to provide liquidity, which would reduce the value of a Fund. If a Fund has lower average daily trading volumes, it may rely on a small number of third-party market makers to provide a market for the purchase and sale of Shares. Any trading halt or other problem relating to the trading activity of these market makers could result in a dramatic change in the spread between a Fund's net asset value and the price at which the Shares are trading on the Exchange which could result in a decrease in value of the Shares.

Market Risk. Securities in the Indices are subject to market fluctuations. You should anticipate that the value of the Shares will decline, more or less, in correlation with any decline in value of the securities in the Indices. A significant percentage of each Index may be composed of issuers in a single industry or sector of the economy. If a Fund is focused in an industry or sector, the Fund may face more risks than if it were broadly diversified over numerous industries and sectors of the economy. At times, such industry or sector may be out of favor and underperform other industries or sectors or the market as a whole.

Mid Capitalization Risk. Each Index and therefore each Fund will comprise mid capitalization stocks. As a result, the Funds may be exposed to additional risk associated with mid capitalization companies. Increased exposure to mid capitalization companies may cause a Fund to be more vulnerable to adverse general market or economic developments because such securities may be less liquid and subject to greater price volatility than those of larger, more established companies. Stocks of mid capitalization companies may be subject to more abrupt or erratic market movements than those of larger, more established companies or the market averages in general. Such companies may have limited product lines, markets or financial resources, and they may be dependent on a limited management group.

Mortgage REIT Risk. Although the Financials Fund will not invest in real estate directly, the mortgage REITs in which the Fund may invest will be subject to risks inherent in the direct ownership of real estate. These risks include, among others: fluctuations in the value of the underlying properties; defaults by borrowers or tenants; market saturation; changes in general and local economic conditions; decreases in market rates for rents; changes in the availability, cost and terms of mortgage funds; increased competition,

property taxes, capital expenditures, or operating expenses; and other occurrences, including the impact of changes in environmental laws, that may affect the real estate industry. A REIT that fails to comply with federal tax requirements affecting REITs may be subject to federal income taxation, or the federal tax requirement that a REIT distribute substantially all of its net income to its shareholders may result in a REIT having insufficient capital for future expenditures. The value of a REIT can depend on the structure of and cash flow generated by the REIT. In addition, like mutual funds, REITs have expenses, including advisory and administration fees, that their shareholders pay. As a result, an investor will absorb duplicate levels of fees when the Fund invests in mortgage REITs. In addition, REITs are subject to certain provisions under federal tax law. The failure of a company to qualify as a REIT could have adverse consequences for the Fund, including significantly reducing return to the Fund on its investment in such company.

Mortgage REITs lend money to developers and owners of properties and invest primarily in mortgages and similar real estate interests. Mortgage REITs receive interest payments from the owners of the mortgaged properties. Accordingly, mortgage REITs are subject to the credit risk of the borrowers to whom they extend funds. Credit risk is the risk that the borrower will not be able to make interest and principal payments on the loan to the REIT when they are due. Mortgage REITs also are subject to the risk that the value of mortgaged properties may be less than the amounts owed on the properties. If a mortgage REIT is required to foreclose on a borrower, the amount recovered in connection with the foreclosure may be less than the amount owed to the mortgage REIT. Mortgage REITs are subject to significant interest rate risk. During periods when interest rates are declining, mortgages are often refinanced or prepaid. Refinancing or prepayment of mortgages may reduce the yield of mortgage REITs. When interest rates decline, however, the value of a REIT's investment in fixed rate obligations can be expected to rise. Conversely, when interest rates rise, the value of a REIT's investment in fixed rate obligations can be expected to decline. In addition, rising interest rates generally increase the costs of obtaining financing, which could cause the value of a mortgage REIT's investments to decline. A REIT's investment in adjustable rate obligations may react differently to interest rate changes than an investment in fixed rate obligations. As interest rates on adjustable rate mortgage loans are reset periodically, yields on a REIT's investment in such loans will gradually align themselves to reflect changes in market interest rates, causing the value of such investments to fluctuate less dramatically in response to interest rate fluctuations than would investments in fixed rate obligations. Mortgage REITs typically use leverage (and in many cases, may be highly leveraged), which increases investment risk and could adversely affect a REIT's operations and market value in periods of rising interest rates, increased interest rate volatility, downturns in the economy and reductions in the availability of financing or deterioration in the conditions of the REIT's mortgage-related assets.

New Fund Risk. Each Fund currently has fewer assets than larger funds, and like other relatively new funds, large inflows and outflows may impact the Funds' market exposure for limited periods of time. This impact may be positive or negative, depending on the direction of market movement during the period affected. Also, during the initial invest-up period, a Fund may depart from its principal investment strategies and invest a larger amount or all of its assets in cash equivalents, or it may hold cash.

Non-Correlation Risk. Each Fund's return may not match the return of its respective Index for a number of reasons. For example, a Fund incurs operating expenses not applicable to the Index and incurs costs in buying and selling securities, especially when rebalancing the Fund's securities holdings to reflect changes in the composition of the Index. In addition, the performance of a Fund and its Index may vary

due to asset valuation differences and differences between the Fund's portfolio and the Index resulting from legal restrictions, cost or liquidity constraints. A Fund may fair value certain of the securities it holds. To the extent a Fund calculates its NAV based on fair value prices, the Fund's ability to track the Index may be adversely affected. Since each Index is not subject to the tax diversification requirements to which its respective Fund must adhere, a Fund may be required to deviate its investments from the securities and relative weightings of its Index. A Fund may not invest in certain securities included in its Index due to liquidity constraints. Liquidity constraints also may delay a Fund's purchase or sale of securities included in its Index. For tax efficiency purposes, a Fund may sell certain securities to realize losses, causing it to deviate from its Index.

Non-Diversification Risk. Because each Fund is non-diversified and can invest a greater portion of its assets in securities of individual issuers than a diversified fund, changes in the market value of a single investment could cause greater fluctuations in Share price than would occur in a diversified fund. This may increase a Fund's volatility and cause the performance of a relatively small number of issuers to have a greater impact on the Fund's performance.

Oil and Gas Services Industry Concentration Risk. For the Energy Fund and the Utilities Fund, the profitability of companies in the oil and gas services industry may be adversely affected by world events in the regions that the companies operate (*e.g.*, expropriation, nationalization, confiscation of assets and property or the imposition of restrictions on foreign investments and repatriation of capital, military coups, social unrest, violence or labor unrest). Prices and supplies of oil and gas may fluctuate significantly over short and long periods of time due to national and international political changes, Organization of Petroleum Exporting Countries ("OPEC") policies, changes in relationships among OPEC members and between OPEC and oil-importing nations, the regulatory environment, taxation policies, and the economy of the key energy-consuming countries. In addition, companies in the oil and gas services industry are at risk of civil liability from accidents resulting in injury, loss of life or property, pollution or other environmental damage claims and risk of loss from terrorism and natural disasters. Disruptions in oil and gas services or shifts in fuel consumption may significantly impact companies in this industry. Companies in the oil and gas services industry also may have significant capital investments in, or engage in transactions involving, emerging market countries, which may heighten these risks. Recent global economic events have created greater volatility in the oil and gas services industry, including substantial declines in the price of oil. Such events may create wide fluctuations in the value of companies in this industry, which may affect the Shares.

Utilities Sector Risk. The Utilities Fund faces the risks inherent in the utilities sector, which include a variety of factors that may adversely affect the business or operations of utilities companies, including high interest costs associated with capital construction and improvement programs; difficulty in raising adequate capital on reasonable terms in periods of high inflation and unsettled capital markets; governmental regulation of rates that the issuer can charge to customers; costs associated with compliance with, and adjusting to changes to, environmental and other regulations; effects of economic slowdowns and surplus capacity; increased competition from other providers of utility services; inexperience with, and potential losses resulting from, a developing deregulatory environment; costs associated with the reduced availability of certain types of fuel, occasionally reduced availability and high costs of natural gas for resale, and the effects of energy conservation policies; effects of a national energy policy and lengthy delays, and greatly

increased costs and other problems associated with the design, construction, licensing, regulation and operation of nuclear facilities for electric generation, including, among other considerations, the problems associated with the use of radioactive materials and the disposal of radioactive wastes; technological innovations that may render existing plants, equipment or products obsolete; difficulty in obtaining regulatory approval of new technologies; lack of compatibility of telecommunications equipment; potential impact of terrorist activities on the utility industry and its customers; and the impact of natural or man-made disasters. Any such event could have serious consequences for the general population of the affected area and result in a material adverse impact on the Fund's portfolio securities and the performance of the Fund. Issuers in the utilities sector also may be subject to regulation by various governmental authorities and may be affected by the imposition of special tariffs and changes in tax laws, regulatory policies and accounting standards.

NON-PRINCIPAL INVESTMENT STRATEGIES

Each Fund, after investing 90% of its total assets in common stocks that comprise its respective Index, may invest its remaining assets in securities or other instruments not included in the Index and in money market instruments, including repurchase agreements or other funds that invest exclusively in money market instruments (subject to applicable limitations under the Investment Company Act of 1940, as amended (the "1940 Act"), or exemptions therefrom). The Adviser anticipates that it may take approximately three business days (a business day is any day that the New York Stock Exchange ("NYSE") is open) for the Adviser to fully reflect the additions and deletions to each Fund's Index in the portfolio composition of the Fund.

ADDITIONAL RISKS OF INVESTING IN THE FUNDS

The following section provides additional risk information regarding investing in the Funds.

Failure to Qualify as a Regulated Investment Company Risk. If, in any year, a Fund fails to qualify as a regulated investment company under the applicable tax laws, the Fund would be taxed as an ordinary corporation. In such circumstances, the Fund could be required to recognize unrealized gains, pay substantial taxes and interest and make substantial distributions before requalifying as a regulated investment company that is accorded special tax treatment. If a Fund fails to qualify as a regulated investment company, distributions to the Fund's shareholders generally would be eligible for the dividends received deduction in the case of corporate shareholders.

Inflation Risk. Inflation may reduce the intrinsic value of increases in the value of a Fund. Inflation risk is the risk that the value of assets or income from investments will be less in the future as inflation decreases the value of money. As inflation increases, the value of a Fund's assets can decline as can the value of the Fund's distributions.

Legislation and Litigation Risk. Legislation or litigation that affects the value of securities held by a Fund may reduce the value of the Fund. From time to time, various legislative initiatives are proposed that may have a negative impact on certain securities in which a Fund invests. In addition, litigation regarding

any of the securities owned by a Fund may negatively impact the value of the Shares. Such legislation or litigation may cause a Fund to lose value or may result in higher portfolio turnover if the Adviser determines to sell such a holding.

Security Issuer Risk. Issuer-specific attributes may cause a security held by a Fund to be more volatile than the market generally. The value of an individual security or particular type of security may be more volatile than the market as a whole and may perform differently from the value of the market as a whole.

TRADING ISSUES

Trading in Shares on the Exchange may be halted due to market conditions or for reasons that, in the view of the Exchange, make trading in Shares inadvisable. In addition, trading in Shares on the Exchange is subject to trading halts caused by extraordinary market volatility pursuant to the Exchange's "circuit breaker" rules. There can be no assurance that the requirements of the Exchange necessary to maintain the listing of each Fund will continue to be met or will remain unchanged.

SHARES MAY TRADE AT PRICES DIFFERENT THAN NAV

The NAV of the Shares generally will fluctuate with changes in the market value of a Fund's holdings. The market prices of the Shares generally will fluctuate in accordance with changes in NAV, as well as the relative supply of and demand for Shares on the Exchange. The Adviser cannot predict whether the Shares will trade below, at or above their NAV. Price differences may be due largely to the fact that supply and demand forces at work in the secondary trading market for the Shares will be related, but not identical, to the same forces influencing the prices of the securities of a Fund's Index trading individually or in the aggregate at any point in time. In addition, disruptions to creations and redemptions or the existence of extreme market volatility may result in trading prices that differ significantly from NAV. If a shareholder purchases at a time when the market price is at a premium to the NAV or sells at a time when the market price is at a discount to the NAV, the shareholder may sustain losses.

Tax-Advantaged Structure of ETFs

Unlike interests in conventional mutual funds, which typically are bought and sold only at closing NAVs, the Shares are traded throughout the day in the secondary market on a national securities exchange and are created and redeemed principally in-kind in Creation Units at each day's next calculated NAV. These in-kind arrangements are designed to protect ongoing shareholders from the adverse effects on the portfolio of a Fund that could arise from frequent cash redemption transactions. In a conventional mutual fund, redemptions can have an adverse tax impact on taxable shareholders because of the mutual fund's need to sell portfolio securities to obtain cash to meet fund redemptions. These sales may generate taxable gains for the shareholders of the mutual fund, whereas the Shares' in-kind redemption mechanism generally will not lead to a tax event for a Fund or its ongoing shareholders.

Portfolio Holdings

A description of the Trust's policies and procedures with respect to the disclosure of a Fund's portfolio holdings is available in the Funds' SAI, which is available at www.elkhorn.com.

FUND ORGANIZATION

The Funds are series of the Trust, an investment company registered under the 1940 Act. Each Fund is treated as a separate fund with its own investment objective and policies. The Trust is organized as a Massachusetts business trust. Its Board is responsible for the overall management and direction of the Trust. The Board elects the Trust's officers and approves all significant agreements, including those with the Adviser, custodian and fund administrative and accounting agent.

Elkhorn Investments, LLC is a registered investment adviser with its offices at 207 Reber Street, Suite 201, Wheaton, Illinois 60187.

As the Funds' investment adviser, the Adviser has overall responsibility for selecting and continuously monitoring the Funds' investments, managing the Funds' business affairs and providing certain clerical, bookkeeping and other administrative services for the Trust.

There is no one individual primarily responsible for portfolio management decisions for the Funds. Investments are made under the direction of the Investment Committee. The Investment Committee consists of:

- Benjamin Fulton, Chair of the Investment Committee and Chief Executive Officer of the Adviser;
- Graham Day, Head of Product & Research;
- Jeff Wynsma, Senior Portfolio Manager;
- Jordan Golz, Product Development & Research Associate; and
- Derek Babb, Portfolio Manager.

Each member of the Investment Committee has served as a part of the portfolio management team of the Funds since inception. Mr. Fulton has served as Chief Executive Officer and President of the Adviser since 2013. From 2005 to 2013, Mr. Fulton was Managing Director of Invesco PowerShares Capital Management LLC. Mr. Day joined the Adviser in 2014. From 2009 to 2014, Mr. Day served as various capacities, including in strategy and product management, with Invesco PowerShares Capital Management LLC. Mr. Wynsma joined the Adviser in 2013. From 2010 to 2013, Mr. Wynsma was a financial consultant with Benjamin F. Edwards & Co. Mr. Golz joined the Adviser in 2014. Mr. Babb joined the Adviser in 2015.

The Funds' SAI provides additional information about the compensation structure for the members of the Investment Committee, other accounts that the members of the Investment Committee manage and the ownership of Shares by members of the Investment Committee.

Pursuant to an investment advisory agreement, each Fund pays the Adviser an annual management fee; these fees equal 0.29% of the average daily net assets for each Fund. As of the date of this prospectus, the Funds have not paid management fees. Out of the management fee, the Adviser pays substantially all expenses of the Funds, including the cost of transfer agency, custody, fund administration, legal, audit and

other service and license fees, except for distribution and service fees payable pursuant to a Rule 12b-1 plan, if any, brokerage commissions and other expenses connected with the execution of portfolio transactions, taxes, interest, and extraordinary expenses.

The Adviser's management fee is designed to pay the Funds' expenses and to compensate the Adviser for providing services to the Funds.

A discussion regarding the basis for the Board's approval of the Trust's investment advisory agreement on behalf of each Fund will be available in the Funds' Annual Report to shareholders for the fiscal year ended September 30, 2017.

How to Buy and Sell Shares

Each Fund issues or redeems its Shares at NAV per Share only in Creation Units.

Most investors will buy and sell Shares in secondary market transactions through brokers. Shares will be listed for trading on the secondary market on the Exchange. Shares can be bought and sold throughout the trading day like other publicly traded shares. There is no minimum investment. When buying or selling Shares through a broker, you will incur customary brokerage commissions and charges, and you may pay some or all of the spread between the bid and the offered price in the secondary market on each leg of a round trip (purchase and sale) transaction. The Shares trade under the symbols XD for the Consumer Discretionary Fund, XS for the Consumer Staples Fund, XE for the Energy Fund, XF for the Financials Fund, XH for the Health Care Fund, XI for the Industrials Fund, XK for the Information Technology Fund, XM for the Materials Fund, and XU for the Utilities Fund.

Share prices are reported in dollars and cents per Share.

For purposes of the 1940 Act, each Fund is treated as a registered investment company, and the acquisition of Shares by other registered investment companies is subject to the restrictions of Section 12(d)(1) of the 1940 Act. The Trust, on behalf of the Funds, has received an exemptive order from the SEC that permits certain registered investment companies to invest in the Funds beyond the limits set forth in Section 12(d)(1), subject to certain terms and conditions, including that any such investment companies enter into an agreement with the Fund regarding the terms of any investment.

APs may acquire Shares directly from each Fund, and APs may tender their Shares for redemption directly to the Fund, at NAV per Share only in Creation Units or Creation Unit Aggregations, and in accordance with the procedures described in the SAI.

The Funds may liquidate and terminate at any time without shareholder approval.

BOOK ENTRY

Shares are held in book-entry form, which means that no stock certificates are issued. The Depository Trust Company ("DTC") or its nominee is the record owner of all outstanding Shares and is recognized as the owner of all Shares for all purposes.

Investors owning Shares are beneficial owners as shown on the records of DTC or its participants. DTC serves as the securities depository for all Shares. Participants in DTC include securities brokers and dealers, banks, trust companies, clearing corporations and other institutions that directly or indirectly maintain a custodial relationship with DTC. As a beneficial owner of Shares, you are not entitled to receive physical delivery of stock certificates or to have Shares registered in your name, and you are not considered a registered owner of Shares. Therefore, to exercise any right as an owner of Shares, you must rely upon the procedures of DTC and its participants. These procedures are the same as those that apply to any other stocks that you hold in book entry or “street name” form.

FUND SHARE TRADING PRICES

The trading prices of Shares on the Exchange may differ from each Fund’s daily NAV. Market forces of supply and demand, economic conditions and other factors may affect the trading prices of Shares.

The approximate value of Shares, an amount representing on a per Share basis the sum of the current market price of the securities accepted by each Fund in exchange for Shares and an estimated cash component, will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. This approximate value should not be viewed as a “real-time” update of the NAV per Share of a Fund because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. Each Fund is not involved in, or responsible for, the calculation or dissemination of the approximate value and the Fund does not make any warranty as to its accuracy.

FREQUENT PURCHASES AND REDEMPTIONS OF FUND SHARES

Shares may be purchased and redeemed directly from each Fund only in Creation Units by APs that have entered into agreements with the Funds’ distributor. The vast majority of trading in Shares occurs on the secondary market and does not involve the Funds directly. In-kind purchases and redemptions of Creation Units by APs and cash trades on the secondary market are unlikely to cause many of the harmful effects of frequent purchases and/or redemptions of Shares. Cash purchases and/or redemptions of Creation Units, however, can result in increased tracking error, disruption of portfolio management, dilution to a Fund and increased transaction costs, which could negatively impact the Fund’s ability to achieve its investment objective, and may lead to the realization of capital gains. These consequences may increase as the frequency of cash purchases and redemptions of Creation Units by APs increases. However, direct trading by APs is critical to ensuring that Shares trade at or close to NAV.

To minimize these potential consequences of frequent purchases and redemptions of Shares, each Fund imposes transaction fees on purchases and redemptions of Creation Units to cover the custodial and other costs the Fund incurs in effecting trades. In addition, each Fund reserves the right to not accept orders from APs that the Adviser has determined may be disruptive to the management of the Fund or otherwise are not in the best interests of the Fund. For these reasons, the Board has not adopted policies and procedures with respect to frequent purchases and redemptions of Shares.

Dividends, Distributions and Taxes

This section describes tax matters applicable to each Fund. Ordinarily, dividends from net investment income, if any, are declared and paid at least annually by the Funds. Each Fund distributes its net realized capital gains, if any, to shareholders annually.

Distributions in cash may be reinvested automatically in additional whole Shares only if the broker through whom you purchased Shares makes such option available.

TAXES

Each Fund intends to continue qualify as a “regulated investment company” under the federal tax laws. If a Fund qualifies as a regulated investment company and distributes its income as required by the tax law, the Fund generally will not pay federal income taxes.

As with any investment, you should consider how your investment in Shares will be taxed. The tax information in this prospectus is provided as general information. You should consult your own tax professional about the tax consequences of an investment in Shares.

Unless your investment in Shares is made through a tax-exempt entity or tax-deferred retirement account, such as an IRA plan, you need to be aware of the possible tax consequences when:

- Your Fund makes distributions,
- You sell your Shares listed on the Exchange, and
- You purchase or redeem Creation Units.

TAXES ON DISTRIBUTIONS

Each Fund’s distributions are generally taxable. After the end of each year, you will receive a tax statement that separates the distributions of the Fund into two categories, ordinary income distributions and capital gains dividends. Ordinary income distributions are generally taxed at your ordinary tax rate; however, as further discussed below, certain ordinary income distributions received from the Fund may be taxed at the capital gains tax rates. Generally, you will treat all capital gain dividends as long-term capital gains regardless of how long you have owned your Shares. To determine your actual tax liability for your capital gains dividends, you must calculate your total net capital gain or loss for the tax year after considering all of your other taxable transactions, as described below. In addition, the Fund may make distributions that represent a return of capital for tax purposes and thus will generally not be taxable to you; however, such distributions may reduce your tax basis, which could result in you having to pay higher taxes in the future when Shares are sold, even if you sell the Shares at a loss from your original investment. The tax status of your distributions from the Fund is not affected by whether you reinvest your distributions in additional Shares or receive them in cash. The income from the Fund that you must take into account for federal income tax purposes is not reduced by amounts used to pay a deferred sales fee, if any. The tax laws may require you to treat distributions made to you in January as if you had received them on December 31 of the previous year.

Income from the Fund may also be subject to a 3.8% “Medicare tax.” This tax generally applies to your net investment income if your adjusted gross income exceeds certain threshold amounts, which are \$250,000 in the case of married couples filing joint returns and \$200,000 in the case of single individuals.

A corporation that owns Shares generally will not be entitled to the dividends received deduction with respect to many dividends received from the Fund because the dividends received deduction is generally not available for distributions from regulated investment companies. However, certain ordinary income dividends on Shares that are attributable to qualifying dividends received by the Fund from certain corporations may be reported by the Fund as being eligible for the dividends received deduction.

If you are an individual, the maximum marginal stated federal tax rate for net capital gain is generally 20% for taxpayers in the 39.6% tax bracket, 15% for taxpayers in the 25%, 28%, 33% and 35% tax brackets and 0% for taxpayers in the 10% and 15% tax brackets. Some capital gains dividends may be taxed at a higher maximum stated tax rate. Capital gains may also be subject to the Medicare tax described above.

Net capital gain equals net long-term capital gain minus net short-term capital loss for the taxable year. Capital gain or loss is long-term if the holding period for the asset is more than one year and is short-term if the holding period for the asset is one year or less. You must exclude the date you purchase your Shares to determine your holding period. However, if you receive a capital gain dividend from the Fund and sell your Shares at a loss after holding it for six months or less, the loss will be recharacterized as long-term capital loss to the extent of the capital gain dividend received. The tax rates for capital gains realized from assets held for one year or less are generally the same as for ordinary income. The Code treats certain capital gains as ordinary income in special situations.

Ordinary income dividends received by an individual shareholder from a regulated investment company such as the Fund are generally taxed at the same rates that apply to net capital gain (as discussed above), provided certain holding period requirements are satisfied and provided the dividends are attributable to qualifying dividends received by the Fund itself. Distributions with respect to Shares in REITs are qualifying dividends only in limited circumstances. The Fund will provide notice to its shareholders of the amount of any distribution which may be taken into account as a dividend which is eligible for the capital gains tax rates.

TAXES ON EXCHANGE-LISTED SHARE SALES

If you sell or redeem your Shares, you will generally recognize a taxable gain or loss. To determine the amount of this gain or loss, you must subtract your tax basis in your Shares from the amount you receive in the transaction. Your tax basis in your Shares is generally equal to the cost of your Shares, generally including sales charges. In some cases, however, you may have to adjust your tax basis after you purchase your Shares.

TAXES ON PURCHASE AND REDEMPTION OF CREATION UNITS

If you exchange securities for Creation Units you will generally recognize a gain or a loss. The gain or loss will be equal to the difference between the market value of the Creation Units at the time and your aggregate basis in the securities surrendered and the cash component paid. If you exchange Creation Units

for securities, you will generally recognize a gain or loss equal to the difference between your basis in the Creation Units and the aggregate market value of the securities received and any cash redemption amount. The Internal Revenue Service, however, may assert that a loss realized upon an exchange of securities for Creation Units or Creation Units for securities cannot be deducted currently under the rules governing “wash sales,” or on the basis that there has been no significant change in economic position.

Under current federal tax laws, any capital gain or loss realized upon redemption of Creation Units generally is treated as long-term capital gain or loss if the Shares have been held for more than one year and as a short-term capital gain or loss if the Shares have been held for one year or less. If you purchase or redeem Creation Units, you will be sent a confirmation statement showing how many Shares you purchased or sold and at what price.

The foregoing discussion summarizes some of the possible consequences under current federal tax law of an investment in the Funds. It is not a substitute for personal tax advice. You also may be subject to state and local tax on Fund distributions and sales of Shares.

Consult your personal tax advisor about the potential tax consequences of an investment in Shares under all applicable tax laws. See “Taxes” in the SAI for more information.

Distribution Plan

ALPS Distributors, Inc. (the “Distributor”) serves as the distributor of Creation Units for the Funds on an agency basis. The Distributor does not maintain a secondary market in Shares.

The Board has adopted a Distribution and Service Plan pursuant to Rule 12b-1 under the 1940 Act. In accordance with its Rule 12b-1 plan, each Fund is authorized to pay an amount up to 0.25% of its average daily net assets each year to reimburse the Distributor for amounts expended to finance activities primarily intended to result in the sale of Creation Units or the provision of investor services. The Distributor may also use this amount to compensate securities dealers or other persons that are APs for providing distribution assistance, including broker-dealer and shareholder support and educational and promotional services.

The Funds do not currently pay 12b-1 fees, and the Funds will not pay 12b-1 fees any time before September 30, 2018. However, in the event 12b-1 fees are charged in the future, because these fees are paid out of each Fund’s assets, over time these fees will increase the cost of your investment and may cost you more than certain other types of sales charges.

Net Asset Value

Each Fund’s net asset value is determined as of the close of trading (normally 4:00 p.m., Eastern time) on each day the New York Stock Exchange is open for business. Net asset value is calculated for each Fund by taking the market price of the Fund’s total assets, including interest or dividends accrued but not yet collected, less all liabilities, and dividing such amount by the total number of Shares outstanding. The result, rounded to the nearest cent, is the net asset value per Share. All valuations are subject to review by the Trust’s Board or its delegate.

Each Fund's investments are valued daily in accordance with valuation procedures adopted by the Board, and in accordance with provisions of the 1940 Act. Certain securities in which a Fund may invest are not listed on any securities exchange or board of trade. Such securities are typically bought and sold by institutional investors in individually negotiated private transactions that function in many respects like an over the counter secondary market, although typically no formal market makers exist. Certain securities, particularly debt securities, have few or no trades, or trade infrequently, and information regarding a specific security may not be widely available or may be incomplete. Accordingly, determinations of the fair value of debt securities may be based on infrequent and dated information. Because there is less reliable, objective data available, elements of judgment may play a greater role in valuation of debt securities than for other types of securities. Typically, debt securities are valued using information provided by a third-party pricing service. The third-party pricing service primarily uses broker quotes to value the securities.

Each Fund's investments will be valued daily at market value or, in the absence of market value with respect to any investment, at fair value in accordance with valuation procedures adopted by the Board and in accordance with the 1940 Act. Market value prices represent last sale or official closing prices from a national or foreign exchange (*i.e.*, a regulated market) and are primarily obtained from third-party pricing services.

Certain securities may not be able to be priced by pre-established pricing methods. Such securities may be valued by the Board or its delegate at fair value. The use of fair value pricing by each Fund is governed by valuation procedures adopted by the Board and in accordance with the provisions of the 1940 Act. These securities generally include, but are not limited to, certain restricted securities (securities which may not be publicly sold without registration under the Securities Act of 1933, as amended (the "Securities Act")) for which a pricing service is unable to provide a market price; securities whose trading has been formally suspended; a security whose market price is not available from a pre-established pricing source; a security with respect to which an event has occurred that is likely to materially affect the value of the security after the market has closed but before the calculation of a Fund's net asset value or make it difficult or impossible to obtain a reliable market quotation; and a security whose price, as provided by the pricing service, does not reflect the security's "fair value." As a general principle, the current "fair value" of a security would appear to be the amount which the owner might reasonably expect to receive for the security upon its current sale. The use of fair value prices by a Fund generally results in the prices used by the Fund that may differ from current market quotations or official closing prices on the applicable exchange. A variety of factors may be considered in determining the fair value of such securities. Valuing a Fund's securities using fair value pricing will result in using prices for those securities that may differ from current market valuations. See the Funds' SAI for details.

Even when market quotations are available for portfolio securities, they may be stale or unreliable because the security is not traded frequently, trading on the security ceased before the close of the trading market or issuer-specific events occurred after the security ceased trading or because of the passage of time between the close of the market on which the security trades and the close of the Exchange and when each Fund calculates its NAV. Events that may cause the last market quotation to be unreliable include a merger or insolvency, events which affect a geographical area or an industry segment, such as political events or natural disasters, or market events, such as a significant movement in the U.S. market. Where market quotations are not readily available, including where the Adviser determines that the closing price

of the security is unreliable, the Adviser will value the security at fair value in good faith using procedures approved by the Board. Fair value pricing involves subjective judgments and it is possible that a fair value determination for a security is materially different than the value that could be realized upon the sale of the security. In addition, fair value pricing could result in a difference between the prices used to calculate a Fund's NAV and the prices used by the Fund's Index. This may adversely affect a Fund's ability to track its respective Index.

Fund Service Providers

The Bank of New York Mellon, 101 Barclay Street, New York, New York 10286, is the administrator, custodian and fund accounting and transfer agent for the Funds.

Chapman and Cutler LLP, 111 West Monroe Street, Chicago, Illinois 60603, serves as legal counsel to the Trust.

Grant Thornton LLP, 171 North Clark Street, Suite 200, Chicago, Illinois 60601, serves as the Funds' independent registered public accounting firm and is responsible for auditing the annual financial statements of the Funds.

Financial Highlights

Each Fund is new and has no performance history as of the date of this prospectus. Financial information therefore is not available.

Index Provider

The Indices have been licensed for use for certain purposes by the Adviser. The Index Provider is not affiliated with the Trust, the Adviser or the Distributor. The Funds are entitled to use the Indices pursuant to a sub-licensing agreement with the Adviser.

No entity that creates, compiles, sponsors or maintains an index is or will be an affiliated person, as defined in Section 2(a)(3) of the 1940 Act, or an affiliated person of an affiliated person, of the Trust, the Adviser, the Distributor or a promoter of the Funds.

Neither the Adviser nor any affiliate of the Adviser has any rights to influence the selection of the securities in the Indices.

ELIGIBILITY CRITERIA

Each Index is a subset of the S&P MidCap 400® (the "S&P MidCap 400"), which reflects the U.S. mid capitalization market. The constituents of the S&P MidCap 400 are each categorized into economic sectors according to the Global Industry Classification Standard ("GICS®"). GICS® assigns a company to a single sector according to its "principal business activity," which GICS® determines by such factors as the source of the company's revenues and the market perception of that company's business. Each Index is designed to measure the overall performance of stocks in its respective economic sector.

The S&P MidCap 400 follows several criteria for index eligibility. Each company must be a U.S. company, as determined by the governing rules detailed in the index methodology. Further, the previous quarter's as-reported earnings, as well as the sum of trailing as-reported earnings over the previous four consecutive quarters, should be positive. Additionally, at least 50% of the company's stock must be publicly held, and the company's stock must demonstrate adequate liquidity, as determined by governing rules detailed in the index methodology. Lastly, eligible securities include common equities listed on major U.S. exchanges, including real estate investment trusts ("REITs"). Ineligible securities are detailed in the index methodology and include, but are not limited to, operating companies, including business development companies ("BDCs"), limited partnerships, master limited partnerships ("MLPs"), over-the-counter bulletin board issues, closed-end funds, exchange-traded funds, exchange-traded notes, royalty trusts, convertible bonds, investment trusts, rights and American Depositary Receipts. The balance of industries represented in the S&P MidCap 400 must accurately represent the balance of industries represented in the universe of companies eligible for inclusion in each Index.

The Index Provider reconstitutes and rebalances each Index on a quarterly basis on the third Friday of March, June, September and December. The Index components, shares outstanding and weighting factors are determined as of the rebalancing date, while the prices for the components' shares are used as of one week prior to the rebalancing date. Each component company's weight in an Index is capped at 22.5%, and the sum of all stocks constituting more than 4.5% of an Index cannot exceed 45% of that Index. If this 45% limit is breached, the Index Provider ranks all the stocks in descending order of their weights and identifies the first stock that causes the 45% limit to be breached. The Index Provider then reduces the weighting of this stock either until the 45% limit is satisfied or its weight in the Index falls below 4.5%. If any stock exceeds either the 22.5% limit or the 45% limit, the Index Provider proportionally redistributes its excess weight to all uncapped stocks.

INDEX CONSTRUCTION

The S&P MidCap 400 is designed to measure the performance of 400 mid-sized companies in the U.S., reflecting this market segment's distinctive risk and return characteristics. Mid cap exposure generally captures a phase in the typical corporate life cycle in which firms have successfully navigated the challenges specific to small companies, such as raising initial capital and managing early growth. At the same time, mid caps tend to be quite dynamic and not so large that continued growth is unattainable. As a result, the mid cap segment may offer aspects of the markets not covered by the large- and small-cap worlds.

- **Universe.** All constituents must be U.S. companies.
- **Eligibility Market Cap.** Companies with unadjusted market cap of USD 1.4 billion to USD 5.9 billion.
- **Public Float.** At least 50% of shares outstanding must be available for trading.
- **Financial Viability.** Companies must have positive as-reported earnings over the most recent quarter, as well as over the most recent four quarters (summed together).

- **Adequate Liquidity and Reasonable Price.** Consists of liquid common stocks, with active secondary markets.

INDEX CALCULATIONS

The S&P MidCap 400 and each Index is calculated by means of the divisor methodology used for S&P Dow Jones Indices' equity indices.

For more information on each Index calculation methodology, please refer to S&P Dow Jones Indices' Index Mathematics Methodology.

The Adviser makes no warranty, express or implied, as to results to be obtained by the Funds, owners of the Shares any other person or entity from the use of the Index or any data included therein. The Adviser makes no express or implied warranties, and expressly disclaims all warranties of merchantability or fitness for a particular purpose or use with respect to the Index or any data included therein. Without limiting any of the foregoing, in no event shall the Adviser have any liability for any special, punitive, direct, indirect or consequential damages (including lost profits) arising out of matters relating to the use of the Index even if notified of the possibility of such damages.

Premium/Discount Information

The market prices of the Shares generally will fluctuate in accordance with changes in NAV, as well as the relative supply of and demand for Shares on the Exchange. The Adviser cannot predict whether the Shares will trade below, at or above their NAV. The approximate value of the Shares, which is an amount representing on a per share basis the sum of the current market price of the securities (and an estimated cash component) accepted by each Fund in exchange for Shares, will be disseminated every 15 seconds throughout the trading day through the facilities of the Consolidated Tape Association. This approximate value should not be viewed as a "real-time" update of the NAV per Share of a Fund because the approximate value may not be calculated in the same manner as the NAV, which is computed once a day, generally at the end of the business day. The Funds are not involved with, or responsible for, the calculation or dissemination of the approximate value, and the Funds do not make any warranty as to its accuracy.

Information regarding how often the Shares traded on the Exchange at a price above (at a premium) or below (at a discount) the NAV of each Fund during the past four calendar quarters, when available, will be found at www.elkhorn.com.

Other Information

Section 12(d)(1) of the 1940 Act restricts investments by investment companies in the securities of other investment companies, including Shares. Registered investment companies are permitted to invest in the Funds beyond the limits set forth in Section 12(d)(1) subject to certain terms and conditions set forth in an SEC exemptive order issued to the Trust, including that such investment companies enter into an agreement with the Trust on behalf of the Fund prior to exceeding the limits imposed by Section 12(d)(1).

CONTINUOUS OFFERING

The method by which Creation Unit Aggregations of Shares are created and traded may raise certain issues under applicable securities laws. Because new Creation Unit Aggregations of Shares are issued and sold by each Fund on an ongoing basis, a “distribution,” as such term is used in the Securities Act, may occur at any point. Broker-dealers and other persons are cautioned that some activities on their part may, depending on the circumstances, result in their being deemed participants in a distribution in a manner which could render them statutory underwriters and subject them to the prospectus delivery requirement and liability provisions of the Securities Act.

For example, a broker-dealer firm or its client may be deemed a statutory underwriter if it takes Creation Unit Aggregations after placing an order with the Distributor, breaks them down into constituent Shares and sells such Shares directly to customers, or if it chooses to couple the creation of a supply of new Shares with an active selling effort involving solicitation of secondary market demand for Shares. A determination of whether one is an underwriter for purposes of the Securities Act must take into account all the facts and circumstances pertaining to the activities of the broker-dealer or its client in the particular case, and the examples mentioned above should not be considered a complete description of all the activities that could lead to a characterization as an underwriter.

Broker-dealer firms also should note that dealers who are not “underwriters” but are effecting transactions in Shares, whether or not participating in the distribution of Shares, generally are required to deliver a prospectus. This is because the prospectus delivery exemption in Section 4(a)(3)(C) of the Securities Act is not available in respect of such transactions as a result of Section 24(d) of the 1940 Act. As a result, broker-dealer firms should note that dealers who are not “underwriters” but are participating in a distribution (as contrasted with engaging in ordinary secondary market transactions), and thus dealing with the Shares that are part of an over-allotment within the meaning of Section 4(a)(3)(C) of the Securities Act, will be unable to take advantage of the prospectus delivery exemption provided by Section 4(3) of the Securities Act. For delivery of prospectuses to exchange members, the prospectus delivery mechanism of Rule 153 under the Securities Act only is available with respect to transactions on a national exchange.

DELIVERY OF SHAREHOLDER DOCUMENTS—HOUSEHOLDING

Householding is an option available to certain investors of the Funds. Householding is a method of delivery, based on the preference of the individual investor, in which a single copy of certain shareholder documents can be delivered to investors who share the same address, even if their accounts are registered under different names. Householding for the Funds is available through certain broker-dealers. If you are interested in enrolling in householding and receiving a single copy of the prospectus and other shareholder documents, please contact your broker-dealer. If you currently are enrolled in householding and wish to change your householding status, please contact your broker-dealer.

For More Information

For more detailed information on the Trust, Funds and Shares, you may request a copy of the Funds’ SAI. The SAI provides detailed information about the Funds and is incorporated by reference into this prospectus. This means that the SAI legally is a part of this prospectus. Additional information about each Fund’s investments also will be available in the Fund’s Annual and Semi-Annual Reports to Shareholders, when available. In a Fund’s Annual Report, you will find a discussion of the market conditions and investment strategies that significantly affected the Fund’s performance during the last fiscal year. If you have questions about the Funds or Shares or you wish to obtain the SAI, Annual Report and/or Semi-Annual Report, when available, free of charge, or to make shareholder inquiries, please:

- Call:** Elkhorn ETF Trust at 1-844-355-3837
Monday through Friday
8:00 a.m. to 5:00 p.m. Central Time
- Write:** Elkhorn ETF Trust c/o Elkhorn Investments, LLC
207 Reber Street, Suite 201
Wheaton, IL 60187
- Visit:** www.elkhorn.com

Information about the Funds (including the SAI) can be reviewed and copied at the SEC’s Public Reference Room, 100 F Street NE, Washington, D.C. 20549, and information on the operation of the Public Reference Room may be obtained by calling the SEC at 1-202-551-8090. Reports and other information about the Funds are available on the EDGAR Database on the SEC’s Internet site at www.sec.gov, and copies of this information may be obtained, after paying a duplicating fee, by electronic request at the following e-mail address: publicinfo@sec.gov, or by writing the SEC’s Public Reference Section, Washington, D.C. 20549-1520.

No person is authorized to give any information or to make any representations about the Funds or the Shares not contained in this prospectus, and you should not rely on any other information. Read and keep this prospectus for future reference.

Dealers effecting transactions in the Shares, whether or not participating in this distribution, generally are required to deliver a prospectus. This is in addition to any obligation of dealers to deliver a prospectus when acting as underwriters.

The Trust’s registration number under the 1940 Act is 811-22926.
